November 6, 2026

To Whom It May Concern,

This letter confirms that Muhammad Saad Gulzar provided software engineering services to Iternal Technologies, Inc. as an independent contractor from August 2023 to March 2025 on a remote, project-based basis.

During his engagement, Saad contributed to the design and development of software within Iternal's enterprise AI solution ecosystem. He developed personalized web applications, interactive product demonstrations, and partner-facing proof-of-concept experiences supporting AI-related products and initiatives.

His responsibilities included developing reusable React interfaces, multi-step workflows, configurable business-value calculators, interactive data visualizations, dynamic content-personalization systems, and API-connected document-generation workflows. He also integrated application analytics and translated business requirements, design specifications, and stakeholder feedback into responsive software experiences for desktop and mobile platforms.

Saad worked across initiatives involving Iternal products such as Turnkey AI and Nebulous, as well as partner-facing projects for major technology organizations. High visibility projects included a hyper-personalized marketing campaign for 25,000 recipients in support of Dell's Small and Medium Business segment and an AI-powered campaign for a strategic global defense industry technology reseller. Through this work, he gained practical experience developing software that communicated and supported enterprise AI use cases, solution evaluation, customer engagement, along with increased business acumen.

Throughout his engagement, Saad demonstrated strong software-engineering ability, attention to detail, and responsiveness to feedback. He was capable of working independently while maintaining strong communication skills, understanding evolving requirements, and delivering reliable solutions for complex projects.

We appreciate Saad's contributions and recommend him for software-engineering opportunities and further academic study in artificial intelligence and related computing disciplines.

Sincerely,

Jeremy Greening
Strategic Solution Advisor
Iternal Technologies, Inc.
